At Tri County Roof Cleaners, we specialize in removing moss, algae, mold, mildew, and black stains from your roof. From the simple to the complex, we can get your roof clean, extend the life of your roof, and improve the way your home looks.

When you first see those black streaks, you may just think about how bad it makes your home look. You may not think about how bad that stuff actually is for your roof. The algae, mold, moss and fungus is living material that is literally eating your roof, not to mention becoming a breeding ground for bugs and the spiders that eat those bugs. Left untreated, you could lose 5, 10, or even 15 years off the life of your roof.

Our cleaning process uses an oxygen based biodegradable cleaner that is safe for people, pets, and plants. Plus, our cleaning process have been tested and approved as safe and effective by the top shingle manufacturers.

Maintenance Program

Once your roof is clean, you will want to keep it that way. The initial cleaning lasts about 2-3 years before the stains begin to slowly come back. To keep your roof clean for years to come, we offer a maintenance program for a fraction of the initial cleaning cost. We will come out every other year and spray our chemical on your roof. This will eliminate any new stains that are beginning to form and keep your roof stain free.

Why Replace It... ...When You Can Clean It!

Reasons Why You Should Clean Your Roof:

- Prolong shingle life
- Remove ugly roof stains
- Increase property value
- Inexpensive, fast, dramatic home improvement
- Eliminate bug breeding grounds
- Remove doubts about your roof for potential home buyers
- Cheaper than a new roof
- Improves curb appeal

We Use A Safe, & Effective Chemical Solution For Roof Cleaning:

- Environmentally friendly and biodegradable
- Safe to use around family and pets
- Will NOT harm landscaping
- Quality controlled and professionally proven formula
- Recommended and used by the experts
- Tested and approved by the top shingle manufacturers
